	3, 5, 7	vs.	1, 6, 9
	3, 6, 8	vs.	1, 4, 7
	1, 2, 3	vs.	4, 5, 6
	4, 5, 6	vs.	7, 8, 9
	7, 8, 9	vs.	1, 2, 3

How to Run a Bjerring Tournament

You can play a doubles or triples format (or a combination of both) with your group. For example, if you have 12 players in your group, you could play any variety of combinations: 8-player doubles, 4-player doubles, 3 and 4 player doubles, 7-player triples and 5-player doubles. All you need to do is divide the group up appropriately.

Calculate how long you want to make each round. Generally, 3 to 5 minutes per round is about the right amount of time.

At the end of each round, record if it's a win or a loss for each player and a point differential. If Team 1 defeated Team 2 by a score of 12-8, then each player on Team 1 gets a win along with a +4 point differential. All players on Team 2 record a loss and a -4 point differential. The point differential is a cumulative total, so if a player wins 1 game by 5 points and loses the second game by 3 points, their differential is +2.

The winner of each group is the person with the most wins. If two or more players are equal, then you use the point differential as the tiebreaker.
